

EUROPEAN LANGUAGE DATA SPACE

Common European Language Data Space The LDS Workshop in Finland

Conclusions

Krister Lindén (University of Helsinki, Finland)
Krister.linden@helsinki.fi

10-04-2024 LDS Country Workshop, Helsinki, Finland
<https://language-data-space.ec.europa.eu>

Topics Raised

- Language Technologies (LT) and Artificial Intelligence (AI) need language data
- Large Language Models (LLMs) need vast amounts of language data to train them
- The value of language data: monetising our data and building a European Data Market
- Finland's position with regard to LT and joining the European Data Market
- LDS support for both private and public sectors, industry, research and public administrations

Lessons Learnt

- We need a joint effort to boost the European economy and its industry
- The benefits of sharing and commercializing data are twofold:
 - Data providers can capitalize on their assets
 - LT developers and suppliers, as well researchers and public administrations, benefit from data and technology availability
- The Common European Language Data Space can offer a single market for data and services
